This module combines three sections: bookmarks, recently selected objects, and recently opened scenes.
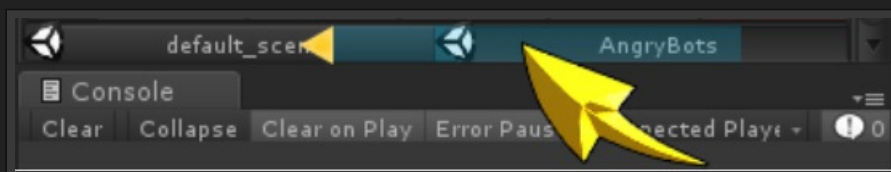

If you need to reduce the height of the module, you can minimize it by left-clicking on its top part.
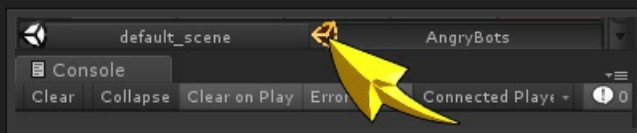

Scenes

A new scene is saved at the bottom of the module, and you can quickly open it by left-clicking on it.

- To select a scene in the project window, hold down 'CTRL' and left-click on the scene.
- To change the position of the scenes, click on the button with the scene and drag it to the desired location.

- To delete the scene button, right-click on it.
- To set the bookmark and lock the scene, click on the scene icon.

Also, you can adjust the number of displayed scenes.

Recently Selected Objects

Recently opened objects will be automatically added to the middle part of the module.

- To navigate sequentially, use the buttons on the left or 'CTRL + SHIFT + Z' and 'CTRL + SHIFT + Y' combinations.
- Drag-and-drop to change the position of the buttons. Right-click to delete buttons.
Also, you can adjust the number of displayed objects.

You can also interact with other windows.

You can place the object in the hierarchy or inspector or any other window by dragging the correspondent button.

Bookmarks

To save a selection of a group of objects, drag these to the top of the module, or press '+' on the right side.

The number of selected objects is specified by a number.

- Drag-and-drop to change the position of the buttons. Right-click to delete buttons.

Also, you can adjust the number of displayed objects.

You can place the object in the hierarchy or inspector or any other window by dragging the correspondent button.
