To call the search box, right-click on any plug-in parameter in the hierarchy window. By right-clicking, you can also call a new search window among the found objects.

After the window opens, you can find the desired object and click on it, which will close the window and select the correspondent object in the hierarchy window. However, you can select several objects by using 'CTRL' and 'SHIFT'.

You can also change some sorting options.

	Pin button fixes the window so that it is not automatically closed when the focus is lost
Filter	Search parameters
Sort by: Hierarchy / Name / Content	Sorting options
	Switch of sorting by ascending and descending
